

Minimizing Uncertainty in the Backcountry

Submitted by Eric Knoff on Wed, 11/12/2014 - 14:49

There are no stoplights in the backcountry. The decision to ride into uncontrolled-avalanche terrain is a personal one with risks and rewards. Done correctly, pinning the throttle through a field of untracked powder or climbing a steep mountain face can produce unmatched excitement, but riding in avalanche terrain can produce severe and sometimes deadly consequences. A great way to increase the margin of safety in the backcountry is to reduce uncertainty about snowpack stability by gathering meaningful information that is relevant to the day's riding plan. This is done by taking a few simple steps before and during a backcountry ride.
