

## Large explosive triggered slide at Y.C.

Yellowstone Club  
Northern Madison  
3/2/2019  
Code  
HS-ABc-R4-D3-G  
Elevation  
8400  
Aspect  
NE  
Latitude  
45.23510  
Longitude  
-111.44800  
Notes

From YCSP: "Today the YC Ski Patrol conducted avalanche mitigation work above one of our roads. The area is outside of our ski area boundary and receives no skier traffic. A 2lb explosives charge was detonated from an aerial tram and triggered a R4/D3 avalanche that ran to the ground on [depth hoar](#) . The crown was 4', The max path width was around 250', and it ran 350 vertical feet to the bottom of the [runout zone](#) . The elevation was 8400' on a ENE a [aspect](#) and max slope angle of 36 degrees. Two sections of road, which were controlled for traffic, were buried with an estimated 15-20 feet deep deposition pile. We've seen this path go big in the Spring, but we can't recall it ever going quite this big."

Number of slides  
1  
Number caught  
0  
Number buried  
0  
Avalanche Type  
Hard slab avalanche  
Trigger  
An explosive detonated above the snow surface (air blast)  
Trigger Modifier  
c-A controlled or intentional release by the indicated trigger  
R size  
4  
D size  
3  
Bed Surface  
G - Ground  
Problem Type  
Deep Persistent Slab  
Slab Thickness  
48.0 inches  
Vertical Fall  
350ft

Slab Width

250.00ft

Weak Layer Grain type

Depth Hoar
