Natural Avalanche West of Cooke City

Other place Out of Advisory Area 3/4/2021 Code SS-N-R2-D2-O Elevation 9300 Aspect SE Latitude 44.98800 Longitude -110.03300 Notes

Avalanche observed just west of Cooke City, outside our advisory area, in Yellowstone National Park on 3/4/2021.

From email: "a fresh, <u>slab</u> avalanche across the valley late this afternoon... I think it is fresh from the last 48 hours if not from today. It was on a SE as <u>aspect</u> around 9300'. By the time I noticed it the light was off the slope, but I could tell that the flank was deep, and that the avalanche probably ran on facets/ dep <u>depth hoar</u> ar the ground. It looked to be a couple hundred feet wide, and at least 3-4' deep."
