Skier remote triggered deep slab near Mt Blackmore

Mt Blackmore Northern Gallatin 3/27/2021 Code HS-ASr-R2-D2-O Elevation 9500 Aspect NE Latitude 45.44070 Longitude -110.99900 Notes

From obs: "Skied Mount Blackmore today. around 1 pm a skier remote triggered a deep <u>slab</u> from ~50 feet away (around the corner lookers right in the attached picture). Broke at the ground, 10-15feet deep, and took out a small tree."

From obs: "My partner and I observed a <u>deep slab avalanche</u> in Blackmore Basin that appeared to break on the <u>depth hoar</u> near the bottom of the snowpack. It was on a wind loaded NE facing slope at approx. 9,500 and looked to break on a slope in the 35-40 degree range. The crown was about 8'-10' deep and 200' wide. It broke to the ground and ripped out several small trees. As soon as we saw it, we came over a small ridge to see another skier near the debris. According to him it was triggered remotely by one of the two skiers on the coming down on the lookers right of the <u>slide</u> ... We confirmed that a beacon search was done to make sure no one was buried."
