 Slope: **28**
 Wind loading: **no**

Stability on similar slopes: **Fair**
 Air Temperature: **C**
 Sky Cover: **sky < 20 covered**
 Precipitation: **None**
 Wind:

Stability Test Notes: Layer note
56-59: Pro

Notes: Just waiting on a load. I'm guessing avalanches might break on the topmost layer of facets. Who knows. There were some sluffs running deeper. I assume that small facets under the new snow helped the sluffs get some legs.
