

Snow Pit Profile  
**Woodward Mtn**  
**S Madison, MT**  
 Elevation (ft) **9050**  
 Aspect: **120**  
 Specifics: **We skied slope.**

Observer: **Mark Staples**  
**Sat Jan 17 14:00:00 MST 2015**  
 Co-ord: **45.02038 N 111.40221 W**  
 Slope: **36**  
 Wind loading: **no**

Stability on similar slopes: **Very Good PS3**  
 Air Temperature: **C**  
 Sky Cover:  
 Precipitation:  
 Wind:

Stability Test Notes: **84-88: Pro**

Notes: Facets at 20-28 cm look worse than they are. They feel solid when I was digging and smoothing the pit wall. On a ENE aspect they wouldn't even test, so I didn't to an ECT. Also on a ENE aspect the nsf's at 88 cm were hardly there and produced ECTN. Nsf's at 88cm were not widespread at doubt will be much of a problem in the future. Overall a very solid snowpack.
